ACKNOWLEDGEMENT

The undertook this project as a part of class 12th computer science course. We had tried to apply our best knowledge and experience gained during the study and classwork experience. However developing software system is generally quite a complex and time consuming process.

It requires a systematic study, insight vision, and professional approach during the design and development. Moreover the developer always feels the need, the help, and the good wishes of the people near you who have considerable experience and knowledge.

We would like to take this opportunity to extend our sincere gratitude to our teacher Mr. Rajesh Sethi and our parents for being the source of inspiration and providing time and freedom to develop the software project in a way that helped us not only apply the skills learnt till now, but also gain valuable experience on some real world applications. We also feel indebted to each other for our valuable suggestions during this project work thus helping it make so much more interesting.

INTREDUCTION

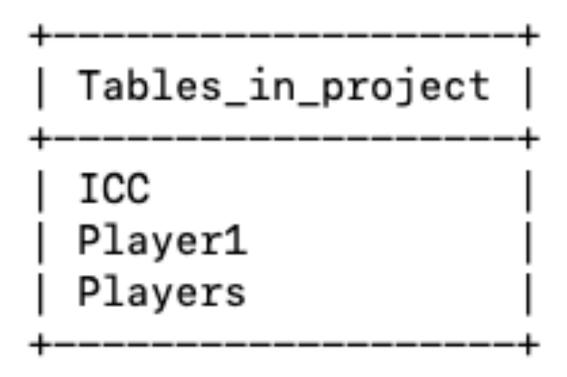

The Cricket All Star Management system allows you to stay updated with the Game and get every information about your Favourite player incorporated with a fun A.I. powered game.

Having been deeply fascinated with the world of cricket, we always felt the need to INTRODUCTION be updated with the current statistics and that is what we provide to our users: A project with the latest ICC database with more than 3000 records including each and every player who has ever donned the cap for his country. With the broad number of fields ranging from Average to the number of hundreds, we provide you a free space to explore and dive deep into the statistics and make your own analysis.

With the aim of making your fantasies come to life, we allow you to modify the database as per your need. You can even create your own player using the add function with the click of a button giving inputs from the number runs you have scored to the number of centuries. You could also delete a player or modify the number of zeroes your favourite player has.

The highlight of the project is our ALL STAR GAME, A game where you compete against computer's Artificial Intelligence. It is time to put your cricketing knowledge to use and select 5 players out of the 10 automatically provided ones. Your goal is to ensure that you pick players that have performed to their best potential in the amount of matches they have played.

This project is a small effort from us to bring the two worlds we hold so close to our heart: THE WORLD OF TECHNOLOGY AND THE WORLD OF CRICKET. We remember the time we use to collect and play cricket attack cards, so come on and let's bring that time back and show our passion and Bleed Blue.

DATABASE

DATABASE NAME : PROJECT

TABLE NAME: ICC

SYSTEM IMPLEMENTATION

The Hardware Used -

- Apple MacBook Pro
- Apple MacBook Air

The Software used -

- Macintosh as an operating system
- IntelliJ IDE as front-end development environment
- MySQL as backend server with database for testing apple pages for documentation

```
